SESSION PLAN

TRAINER NAME : Muhammad Yusri bin Abdullah

DATE:	3rd October 2026
PROGRAMME TITLE	Dashboards Without Code Using Microsoft Power BI: From Data to Decisions
DURATION	4 Hours
LEARNING OUTCOMES	By the end of the session, the participants will be able to: a) Identify and define the key metrics that matter for their role or business b) Prepare and structure data from multiple sources for analysis c) Explain why Power BI is a suitable tool for no-code, management-ready dashboards compared with spreadsheets, other BI platforms and custom-built applications d) Build a simple, interactive dashboard using Microsoft Power BI, with no code e) Interpret trends to distinguish genuine issues from noise or misleading numbers f) Present insights and recommendations to management with confidence, backed by evidence g) Handle data responsibly, with due regard for confidentiality and data protection

Modules / Learning Points	Resources/ Training Aids	Method(s)/ Activities	Duration (minutes)
Introduction and Ice Breaking • Welcome, trainer and participant introductions (8 min) • Programme overview, objectives and ground rules (7 min) • Ice breaking: the 30-second Opening Data Challenge. A messy table, one revenue number: which would you report? (10 min) • Power BI account registration and sign-in check, so every participant is ready to build (5 min)	• Welcome slides • Programme outline • Opening Data Challenge sample table • Participant sign-in guide for Power BI Service (work or school email)	• Facilitated introductions • Ice breaking activity (Opening Data Challenge) • Checkpoint: every participant can sign in to Power BI Service • To make smooth (Create platform group with Candidate for send registration kit for tools before attending the program) • Before training (Send assessment to know level of knowledge regarding the course).	30

Module 1: **Identify Data for Better Decisions** • Lego Challenge: messy data to structured data to a dashboard that tells the story (15min) • The data gap: having data vs. being data-driven, and how to move from data chaos to data value (4 min) • Why stored data is not yet an asset: unstructured, messy, ungoverned data (4 min) • Choosing the right metrics and KPIs for your role, team or business, starting with the "Big Why" and the decisions your data supports (9 min) • Why Power BI? No-code comparison with others software tools. (3 min) Outcome focus: learning outcomes (a) and (c)	• Lecture notes / slides • Lego bricks for the challenge • Miro board (KPI brainstorm)	• Gamified activity (Lego Challenge) • Mini-lecture • Article discussion • Group brainstorming on Miro • Checkpoint: each participant posts three role-specific KPIs on Miro	35
Module 2: Preparing Data for Analysis • Finding and combining data from spreadsheets, systems and reports using no-code tools in Power BI Service (12 min) • Cleaning and structuring data: removing duplicates, filling or flagging missing fields and unknown values (13 min) • Data protection and quality checklist: spotting duplicates, missing fields, unknown values and data bias, plus governance (10 min)	• Lecture notes / slides • Sample datasets (Excel/CSV) for the running case study • Microsoft Power BI Service (free version) • Data protection and quality checklist (duplicates, missing fields, unknown values, bias, governance)	• Lecture • Live demonstration • Hands-on exercise • Checkpoint: the cleaned dataset passes the quality checklist	40

• Confidentiality and responsible data handling (5 min) Outcome focus: learning outcomes (b) and (g)			
Module 3: Building Your Dashboard Without Code • Dashboard design principles: right chart, right analysis and right questions (10 min) • Hands-on build in Power BI Service: KPI cards and trend charts (20 min) • Breakdowns, filters and slicers (15 min) • Interface design with Canva and free button/interface templates (10 min) • Running use cases with synthetic data: participants choose an HR Analytics Dashboard or Turning Sales Data into Revenue Decisions, and review progress with the trainer (10 min) Outcome focus: learning outcome (d)	• Lecture notes / slides • Chart selection guide • Synthetic datasets for the HR Analytics and Sales use cases • Microsoft Power BI Service (free version) • Canva and free button/interface templates • Dashboard checkpoint rubric	• Lecture • Live demonstration • Hands-on dashboard build • Trainer-guided practice • Checkpoint: a dashboard page with three KPI cards, one trend chart and one slicer (will recommend based on learning experience)	65
Module 4: Interpreting and Presenting Insights • Reading trends: separating real problems from noise and misleading numbers (15 min) • Data storytelling: structuring one evidence-based recommendation (10 min) • Capstone: present your dashboard and one evidence-based recommendation, with peer feedback (30 min)	• Lecture notes / slides • Participants' own dashboards • Presentation feedback guide • Personal action plan template • Microsoft Learn Power BI learning paths • Programme feedback form	• Lecture • Group discussion • Capstone presentation with peer feedback • Individual action planning • Checkpoint: each participant leaves with one recommendation and a personal action plan	70

• Back-to-work action plan and next steps on Microsoft Learn (10 min) • Programme wrap-up, questions and feedback (5 min) Outcome focus: learning outcomes (e) and (f)			
			Total number of minutes: 240
